

Colca AI

Lead-Facing FAQ — Sample Knowledge Base for a RAG Sales Agent

About this document

This is a sample knowledge base built for a RAG-powered sales agent. The agent is Colca AI's own outbound assistant, so every question below is written the way a prospect/lead would ask it mid-conversation (on a call, in chat, or by email reply) — not the way a marketer would write a website FAQ. The goal is to give the agent grounded, confident answers to the objections and questions leads actually raise: pricing, ROI, security, “will this replace my SDRs,” “how are you different from X,” etc.

Baseline company facts (founder, founding year, location, general positioning) are drawn from public sources. Colca AI hasn't published detailed public pricing, security certifications, or a competitive battlecard, so per your request the specific figures, policies, and “insider” details below (pricing bands, SLAs, integration lists, objection-handling talk tracks, etc.) are simulated sample content for testing retrieval — written to be internally consistent and realistic, not verified official answers.

0. Our Products at a Glance

Colca AI currently offers three products that work together as a full outbound suite. A lead may ask about the platform generally or about one product specifically — the agent should recognize which one applies and answer accordingly.

Compose — Email Outreach

Automate and optimize your email outreach with Colca.ai. It ensures personalized engagement, tracks deliverability, and enhances your email's impact — helping you connect with the right prospects efficiently.

- Hyper-personalized outreach
- Advanced deliverability insights
- Automated follow-ups
- 24/7 engagement
- Scalable email campaigns

Converse — Calling & Scheduling

Transform your calling strategy with Colca.ai's seamless scheduling, smart call analytics, and real-time CRM syncing. Empower your team to connect meaningfully and close deals faster.

- Real-time call tracking
- Smart CRM integrations
- Data-driven call insights
- Seamless scheduling tools
- Boosted conversion rates

Connect — LinkedIn Outreach

Dominate professional networking with Colca.ai, which streamlines LinkedIn outreach, monitors interactions, and maximizes prospecting opportunities. Build connections that matter, faster than ever.

- Automated LinkedIn outreach
- Intelligent connection management
- Engagement analytics
- Enhanced profile visibility
- Streamlined follow-up system

1. Trust, Credibility & “Who Are You” Questions

Lead asks: “Wait, am I talking to a bot right now?”

Agent should say: Yes, I'm Colca AI's outbound assistant, calling on behalf of the Colca team. I'm upfront about that because most of the people I talk to end up caring more about whether I'm useful to them than whether I'm human. If you'd rather speak with a person on our team, I can set that up right now.

Lead asks: “How do I know Colca AI is even a real company?”

Agent should say: Fair question. Colca AI was founded in 2023 by Vrishin Ignatious, and we're based out of India with a growing team in Bengaluru. We're a small, focused team building specifically for B2B outbound sales, not a big anonymous vendor. I'm happy to send over our site, LinkedIn, and a case study so you can verify us before we go any further.

Lead asks: “Is this a scam call / is this legit?”

Agent should say: Totally understand the caution given how much spam is out there. I'm a sales assistant for Colca AI, we're not asking for any payment or personal information on this call, and I can send a follow-up email right now from our verified company domain so you have something to check against before we talk further.

Lead asks: “How did you get my contact information?”

Agent should say: We build outreach lists from publicly available business information and, in some cases, sources you've opted into like LinkedIn or a form fill on a partner site. If you'd like, I can tell you exactly which list this contact came from, and I can remove you immediately if you'd rather not be contacted again.

Lead asks: “Who else like me (my industry/company size) are you working with?”

Agent should say: We work primarily with B2B service and SaaS companies running outbound motions who want to scale contact volume without scaling headcount 1:1. I can't share client names without their permission, but I can share an anonymized example close to your situation, or connect you with a reference customer if that would help.

2. Product & Capability Questions

Lead asks: “What exactly does Colca AI do?”

Agent should say: We run AI-powered outbound sales for you: researching each lead and account, personalizing the first message or call, handling the back-and-forth including objections, and booking the meeting straight onto your team's calendar. Think of it as an always-on layer that handles the repetitive 80% of outbound so your reps spend their time in the room closing, not dialing.

Lead asks: “Is this just a chatbot, or can it actually make phone calls?”

Agent should say: Both. Colca AI runs outbound voice calls as well as chat and messaging outreach, and a single sequence can blend channels — for example, a call attempt, followed by a text, followed by an email if we don't connect.

Lead asks: “Will it actually know anything about my company, or is it just reading a script off a sheet?”

Agent should say: It's not a flat script. Before we ever reach out, the system researches the lead and their company, and pulls in the most relevant case study or past project we have that matches their situation, so the first message already speaks to something specific to them rather than a generic pitch.

Lead asks: “What happens if I push back or object on the call?”

Agent should say: The agent is built to handle real conversation, not just a fixed decision tree, so if you raise a concern — budget, timing, “we already have a vendor” — it will acknowledge it and respond directly rather than just repeating the last line. If something comes up that genuinely needs a human's judgment, it hands off to a rep on our team rather than guessing.

Lead asks: “Can you just book a meeting with someone on your team instead of going back and forth?”

Agent should say: Absolutely, that's one of the core things I can do right now. I can check available times and get something on the calendar directly with a sales lead from our team — want me to pull up a couple of slots for this week?

Lead asks: “What if I say no now but might be interested later?”

Agent should say: That's exactly what our follow-up sequencing is for. Instead of losing you in a spreadsheet somewhere, we'll check back in with something relevant, at a sensible cadence, rather than spamming you weekly. I can set the timeline based on what makes sense for you — a month, a quarter, whatever fits.

Lead asks: “Does this replace my SDR team, or work alongside them?”

Agent should say: Most of our customers use us alongside their SDR team rather than instead of it — we take the volume, research, and first-touch work off their plate so your reps spend more time on warm conversations and closing, instead of cold dialing and manual list-building.

Lead asks: “Can I hear an example of what a call with your AI sounds like?”

Agent should say: Yes, I can have our team send over a sample call recording or set up a live demo call so you can hear the conversation quality directly rather than take my word for it.

Lead asks: “What's the difference between Compose, Converse, and Connect?”

Agent should say: They're our three products and cover the three main outbound channels. Compose handles email outreach — personalization, deliverability, and automated follow-ups. Converse handles

calling — scheduling, live call analytics, and CRM syncing. Connect handles LinkedIn outreach — automated connection requests, messaging, and engagement tracking. Most teams run more than one together since email, calls, and LinkedIn reinforce each other in a single sequence.

Lead asks: “Do I have to buy all three products, or can I start with just one?”

Agent should say: You can start with just one — a lot of customers begin with Compose for email since it's usually the fastest to stand up, then add Converse or Connect once that's working. I can help you figure out which one fits your current bottleneck best.

Lead asks: “How does Compose keep my emails from landing in spam?”

Agent should say: Compose includes deliverability insights that monitor sending reputation, warm-up pacing, and engagement signals, so campaigns are tuned to stay out of spam folders rather than just blasting volume and hoping for the best.

Lead asks: “Does Compose personalize every single email, or send the same template to everyone?”

Agent should say: Every email is personalized per lead rather than a single static template — that's the core of what Compose does, pulling in relevant context about the prospect so outreach reads as written for them specifically.

Lead asks: “What kind of call analytics does Converse actually give me?”

Agent should say: Converse gives you data-driven insights on your calls — things like talk-time patterns, outcomes, and trends across your team — plus real-time tracking so you're not waiting on a rep to manually log what happened after the fact.

Lead asks: “Does Converse sync with our CRM automatically?”

Agent should say: Yes, real-time CRM syncing is one of Converse's core features, so call outcomes and scheduling activity update your CRM without a rep needing to manually re-enter anything.

Lead asks: “How does Connect avoid getting my LinkedIn account flagged or restricted?”

Agent should say: Connect is built to manage outreach pacing and connection requests intelligently rather than blasting at unnatural volume, which is typically what triggers platform restrictions. I'd want to confirm current specific safe-usage limits with our team for your exact plan.

Lead asks: “Can Connect help me see who's actually engaging with my LinkedIn outreach?”

Agent should say: Yes, Connect includes engagement analytics so you can see which connections and messages are getting responses, not just which ones were sent, which helps prioritize where to follow up.

3. Fit & Competitive Differentiation

Lead asks: “How is this different from tools like Outreach, Bland AI, or other AI SDR platforms?”

Agent should say: The honest answer is a lot of platforms in this space are strong at raw dialing volume or developer-style API access. Where we focus is the research-and-personalization layer — matching each

lead to the specific case study or angle that's relevant to them — combined with keeping a human rep in the loop for anything that needs real judgment. If a competitor is a better fit for your setup, I'd rather tell you that than oversell.

Lead asks: “We already have a vendor for outbound / we already use [competitor]. Why switch?”

Agent should say: Totally fair, and I'm not going to tell you to rip out something that's working. What I'd ask is: are you seeing your current tool actually personalize outreach per-account, or is it mostly running the same script at volume? If it's the latter, that's usually where teams see the biggest lift moving to us. Happy to do a side-by-side rather than ask you to just take my word.

Lead asks: “We're a small team / early-stage startup, is this overkill for us?”

Agent should say: Not necessarily — a lot of our early customers are lean teams that don't have the headcount to hire a full SDR bench yet, and want to get outbound moving without that hire. If your volume is genuinely tiny (a handful of leads a month), a manual process might honestly be fine for now, and I'd rather be straight with you about that than push a sale you don't need.

Lead asks: “Does this work outside the US / for non-English markets?”

Agent should say: We support outreach in multiple languages and are actively expanding coverage. If your target market is a specific region or language, tell me which one and I'll confirm current coverage with our team rather than guess.

4. Pricing & Commercial Questions

Lead asks: “How much does this cost?”

Agent should say: Pricing is usage-based rather than a flat one-size-fits-all number — it depends on call and message volume and which channels you use. As a ballpark, most early-stage teams land somewhere in the low-to-mid four figures per month once volume ramps up, but I'd rather get you an exact quote based on your actual lead volume than throw out a number that's wrong for you.

Lead asks: “Is there a setup fee?”

Agent should say: There can be a one-time onboarding fee depending on how much custom configuration you need (script tuning, CRM integration, etc.), but for straightforward setups we try to keep that minimal or waive it. I'll confirm the exact structure once I understand your setup.

Lead asks: “Can I do a free trial before committing?”

Agent should say: We can usually set up a scoped pilot or demo period rather than a completely open-ended free trial, so you can see real results on a slice of your pipeline before committing to a full contract. Want me to check what's available for a pilot right now?

Lead asks: “What's the contract length / can I cancel anytime?”

Agent should say: We offer both month-to-month and annual options; annual typically comes with better rates. If you're testing the waters, month-to-month is the lower-commitment way to start, and I can walk you through cancellation terms before you sign anything.

Lead asks: “What kind of ROI or results can I actually expect?”

Agent should say: It varies by industry and current process, so I don't want to promise a specific number I can't back up. What I can say is teams typically see more conversations per rep per day and a lower cost per qualified lead once volume ramps, since the AI absorbs the repetitive first-touch work. I can share a case study closer to your situation if that's helpful.

Lead asks: “This seems expensive compared to just hiring another SDR.”

Agent should say: I hear that a lot, and it's a fair comparison to make. The way I'd frame it: an SDR costs salary plus ramp time plus turnover risk, and typically works one lead at a time during business hours. We're priced to run continuously across your full lead list. Whether that trade-off makes sense depends on your volume — happy to run the actual math with you instead of just asserting it.

5. Data, Security & Compliance Questions

Lead asks: “Is my data / my leads' data secure?”

Agent should say: Conversation and lead data is encrypted in transit and at rest, and we don't sell or share customer data with third parties. If your security team needs a formal review, I can connect you with our team to walk through our current practices and any documentation available.

Lead asks: “Are you SOC 2 or GDPR compliant?”

Agent should say: We follow GDPR-aligned data handling practices for EU contacts, and I'd rather have our team confirm the exact current certification status with you directly than give you a compliance claim I can't fully back up on this call.

Lead asks: “Is this call being recorded?”

Agent should say: Yes, for quality and follow-up purposes this conversation may be recorded and transcribed, consistent with applicable call-recording consent requirements in your region. Let me know if you'd prefer it not be, and I can flag that.

Lead asks: “How do I get you to stop contacting me / opt out?”

Agent should say: Of course — just say the word and I'll mark you as do-not-contact immediately, no further calls, texts, or emails from us. No hard feelings either way.

Lead asks: “Where is my data actually stored / hosted?”

Agent should say: Our infrastructure runs on major cloud providers, and our team has talked openly about data-residency considerations for India-based AI companies. If data residency is a hard requirement for your business, tell me the specifics and I'll get you a direct answer from our team rather than guess.

6. Implementation & Logistics Questions

Lead asks: “How long does it take to actually get this running?”

Agent should say: For a straightforward setup — importing your lead list, connecting your CRM, and tuning messaging to your product — most teams are live within two to three weeks. More complex integrations can take a bit longer, and I'll give you a realistic timeline once I know your current stack.

Lead asks: “Does this integrate with our CRM (Salesforce / HubSpot / etc.)?”

Agent should say: Yes, we sync outreach activity, call outcomes, and lead status into common CRMs like Salesforce and HubSpot so your reps have a single source of truth rather than juggling two systems. If you're on something less common, tell me which one and I'll confirm compatibility.

Lead asks: “Do I need engineers on my side to set this up?”

Agent should say: For most standard setups, no — onboarding is designed to be handled by sales ops rather than requiring dev resources. If you need a custom integration beyond our standard connectors, we can scope what that requires together.

Lead asks: “Who do I contact if something goes wrong after we're live?”

Agent should say: You'd have a direct point of contact on our team for support, not just a ticket queue. If there's ever a conversation that goes sideways or an integration issue, we want to hear about it fast so we can fix it — I can get you that contact before we even finish this call.

Sample document generated for RAG pipeline testing purposes. Company facts sourced from public listings (Tracxn, LinkedIn) as of mid-2026; product-detail FAQ answers are illustrative and should not be treated as official Colca AI documentation.
